

DFR Command

Built to start, operate, and grow Drone as First Responder programs.

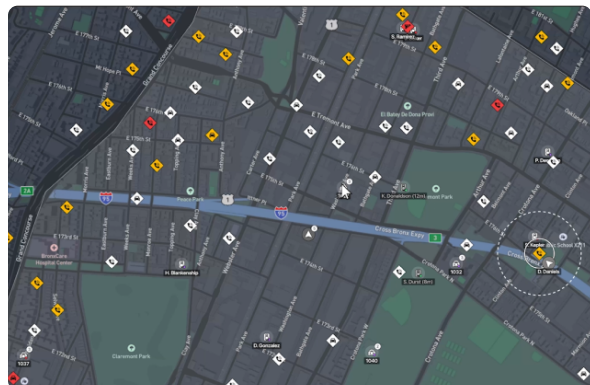

Rapid incident response. Real-time situational awareness. Better, safer decisions. DFR Command is a complete software solution for every aspect of a DFR program, from call-for-service to evidence upload.

Get eyes on scene fast.

DFR Command can route drones to high priority calls within two minutes to keep officers informed and aware of the reality on the ground from one objective source of truth. Better, real-time data supports the de-escalating of incidents and right-size responses — resulting in safer outcomes for officers and their communities.

Build a common operating picture.

Rapidly orient operators and entire teams with Augmented Reality overlays. Street names, addresses, and waypoints populate right on the flight screen so you can quickly coordinate tactics and response. Set perimeters and provide overwatch from every angle with multiple drones at once to maximize coverage.

Airborne in 20 seconds.

Launch drone response with one-click with incident triggers from a CAD, RTCC such as Fusus by Axon, ALPR or acoustic sensor system.

Multiple drones. Multiple missions.

Operators can quickly deploy and control multiple drones or switch drones on missions that call for extended operations with on-station relief.

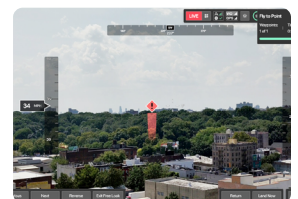

Real-Time situational awareness.

Live stream any drone feed with ReadyLink, a simple-to-use tool for sharing streams with all responders and command staff to support quick decision-making.

Fly from anywhere.

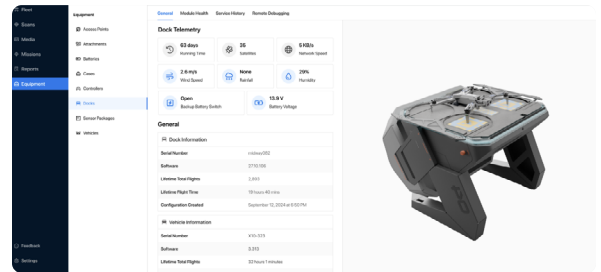

Operate your drones from anywhere with just a browser — from a real-time command center to a Mobile Data Terminal (MDT).

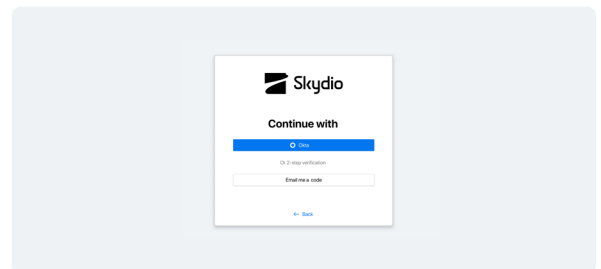

Fleet management, made simple.

Keep equipment ready for action by managing drones, docks, and software licenses with data-driven maintenance insights. Automatically track pilot flight hours, and log-ins, so you can focus on protecting your community, not paperwork.

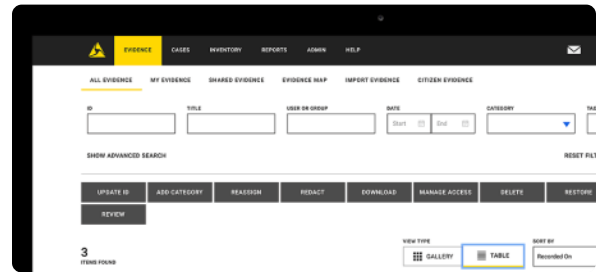

Enterprise-grade security.

DFR Command is built for public safety IT architectures with easy integration into your existing single sign-on system and robust cyber security protections, including SOC 2 Type II compliance.

Maintain chain of custody.

Manage evidence through seamless integration with Axon Evidence, so your data gets delivered to the prosecutor with a clear chain of custody.

Build community trust through transparency.

Share your choice of flight data with your community via an intuitive, publicly accessible Transparency Dashboard that builds trust with the community.

Command staff, local jurisdiction leadership, and decision-makers can leverage program data to help with accountability and support funding for the program.
